EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Claim 1 has been amended as follows:

1. (Currently Amended) A loading unit for a shoe press, especially designed to apply a load to the shoe (70) of the shoe press, said unit comprising:

a first cylinder part and a first piston part disposed in the cylinder part (6, 71),

a ~~second~~ first piston part (1, 114) arranged in the cylinder part, in which piston part the surface (2) facing towards the inner wall of the cylinder part is so shaped as to permit mutual tilting of the piston part and the cylinder part, the loading unit is arranged to be movable in the longitudinal direction (MD) of the machine,

the piston part (1) and/or the cylinder part (6) are/is provided with means for arranging the loading unit (K) to be movable on the press shoe (70) and on a supporting beam (12) so that the loading unit (K) is movable in the space between the press shoe (70) and the supporting beam (12) at least in the machine direction (MD) when the press shoe (70) is supported by preventing its movement in the machine direction, and that the piston part (1) and/or cylinder part are/is provided with means (22) for reducing lateral forces between the loading ~~element~~ unit and the shoe press supporting beam (12) and the loading unit (K) is at least partially supported on ~~the~~ transfer means at least at one end, either on the side of the press shoe (70) or on the side of the

supporting beam (12), in such manner that the transfer means (225, 226, 185) are locked at least when the compressive action of the loading unit is on.

In claim 1 above, it is the first piston part (1, 114), not the second piston part, which comprises the shaped surface (2) to allow mutual tilting (as claimed originally). The second piston is actually part of the claimed second cylinder-piston unit (claim 4). This change is consistent with the language of the subsequent dependent claims.

Also in claim 1 above, the phrase "loading element" has been replaced with "loading unit" to correspond with the remaining recitations of this feature.

Also in claim 1 above, the word "the" preceding the initial recitation of "transfer means" has been deleted to provide antecedent basis for subsequent recitations of "transfer means".

Allowable Subject Matter

Claims 1 and 4-20 are allowed.

The following is an examiner's statement of reasons for allowance:

In a loading unit for a shoe press comprising a first cylinder part and first piston part disposed therein in which a surface of the piston part facing the inner wall of the cylinder part is shaped to permit mutual tilting of the piston part and cylinder part, the prior art does not disclose or suggest arranging the loading unit to be movable in the machine direction on the press shoe and on a supporting beam in the space between the press shoe and the supporting beam when the machine direction movement of the press shoe is prevented, providing means for reducing lateral forces between the loading unit and the supporting beam, and supporting the loading unit on

transfer means on either the press shoe or the supporting beam such that the transfer means can be locked when the compressive action of the loading unit is on.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed March 9, 2009 have been considered.

In view of the arguments and the amendment to the specification, the objection to the specification set forth previously is withdrawn. No new matter has been added.

In view of the arguments and the amendment to the drawing, the objection to the drawings set forth previously is withdrawn. The replacement drawings are accepted. No new matter has been added.

The objections to the claims set forth previously have been overcome by way of amendment. Applicant has also overcome the rejections under 35 U.S.C. 112, second paragraph, set forth previously.

In view of the arguments and amendment to the claims, Applicant has overcome the prior art rejections set forth previously based on Saarinen (US 4,713,147), Brendel (US 6,899,023), Gustavsson et al (US 7,172,679), and Palmgren (US 6,093,283). It is recognized that none of these references teaches or suggests the combination of elements as set forth in claim 1.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven Griffin can be reached on 571 272-1189. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
